PART B: Improvement Targets and Initiatives 2014-15

Four Counties Health Services

	AIM MEASURE				CHANGE				
Quality dimension	Objective	Measure/Indicator	Current performance	1 arget for 2014/15	larget justification	Planned improvement initiatives (Change Ideas)	Methods and process measures	Goal for change ideas (2013/14)	Comments
Safety	Reduce clostridium difficile associated diseases (CDI)	CDI rate per 1,000 patient days: Number of patients newly diagnosed with hospital-	low patient days	Meet or exceed provincial ir average 0.29 cu me	Maintain or improve upon current rate to meet or exceed the provincial average. Very low patient days tends to inflate rate.	1) Antibiotic Stewardship(ABS) •increase emphasis on antibiotic stewardship through the HUGO (Healthcare UnderGoing Optimization), electronic Provider Order Entry (CPOE) initiative •order sets will define the appropriate antibiotic for the admitting diagnosis so that there is more judicial and targeted use of antibiotics • the pharmacist will verify orders as a secondary safety measure • the HUGO order set for the treatment of CDI will standardize treatment for all admitted patients and help reduce relapses • in the fall of 2013 the pharmacist started receiving a twice weekly report of antibiotic prescriptions, used for tracking and reporting antibiotic utilization to P&T	antibiotic prescribing will be initiated.	Develop a reporting tool that monitors evidence based prescribing practices through implementation of HUGO order sets	With implementation of HUGO, clinical interventions documented by the pharmacist with respect to antibiotic stewardship will be captured in the Electronic Patient Record (EPR) Post HUGO implementation, a review of available reports will be completed and a measurable metric for reporting of ABS established. The CDI cases continue to be reviewed on a case by case basis with the ICP (Infection Control Practictioner) and Pharmacist Quarterly reports to the Infection Control Committee and Pharmacy and Therapeutic Committee (P&T)
						2) Cleaning Practices • in 2013 switched CDI cleaning from hydrogen peroxide to a bleach cleaner for daily and terminal cleaning and commenced room audits using an Adenosine Triphosphate (ATP) measuring system • Initiated a standing report of audit results to Infection Control Committee	●ATP measurements collected and correlated by housekeeping manager and will now be an standing agenda item for q 6 month reports to the infection control committee	●100% compliance with cleaning protocols for CDI terminal clean as reflected in meeting the ATP parameters for clean	 housekeeping transitioned from qualitative measuring with fluorescent markers to qualitative measurement with ATP Every terminal clean room is audited and recleaned and reaudited until the compliance parameters are met the cleaning protocol is performed as outlined in the Provincial Infections Diseases Advisory Committee (PIDAC) and verified through a cleaning checklist
						3)Hand Hygiene •Hand hygiene continues to be a corporate priority with expansion of initiative to a more comprehensive practice though departmental auditing rather than centrally	●Train department auditors so that the auditing can expand to incorporate other shifts and help with peer encouragement for good practices ●Continue to utilize the Mariner -online program to track and report compliance numbers		•will expand the number of auditors to provide a more robust denominator and generate a new perspective on promoting hand hygiene within the facility

	AIM MEASURE				CHANGE				
	Medication Reconciliation at admission	Medication reconciliation at admission. The total number of patients with medication reconciled as a proporation of the total number of patients admitted to the hospital. Q3 2013/14	80%		to exceed performance target.	The HUGO CPOE implementation will improve the overall performance. With electronic physician order entry, medication reconciliation on admission will be captured.Quarterly reporting through the National Safer Health Care Now network, monitoring and sharing of performance internally.	Ongoing monitoring and review of statistical data available through Electronic Patient Record (EPR).	Greater than or equal to 90%	With implementation of HUGO CPOE, medication reconciliation is expected to meet or exceed the target. Medication Reconciliation is also recognized as an Accreditation Required Organization Practice (ROPS) and SMGH met requirement elements in Accreditation survey Fall 2013. Also capture and report - Medication Reconciliation on patient transfers.
Effectiveness		Total Margin (consolidated): Percent by which total corporate (consolidated) revenues exceed or fall short of total corporate (consolidated) expense, excluding the impact of facility amortization, in a given year. Q3 2013/14, OHRS	4.80	equal to 0.	indicates good total margin.	Currently achieving performance goal and will continue to monitor through Board Finance Committee. Sustaining Total Margin at zero or better. Ongoing analysis and education surrounding Health System Funding Reform / Quality Based Procedures and Health Based Allocation Model and as to whether the model pertains to small hospitals, and how . A new Financial Planning Analyst role is actively involved in Ministry funding analysis as well as planning and benchmarking analysis. The hospital is engaged in many regional initiatives to enhance patient care which are tied to performance. They include the SW LHIN Regional Integration Decision Support team; the SW LHIN Local Partnership Initiative to identify funding issues and challenges while providing education; the SW LHIN Integrated Health Plan looking at clinical services planning; and Regional Orthopaedic Services. The hospital continues to monitor changes to the Not-For-Profit Corporations Act and the potential impact on governance and changes to Cost Per Weighted Case.	it is tied to Health System Funding Reform funding and changing HBAM and Quality Based Procedure Funding. LEAN initiatives related to improved patient care, education, access, but also costing continue. The priority is in managing limited funding with cost pressures while at	Greater than zero.Monthly completion of finance account by manager of finance, reported to CFO within 2 weeks of month end. Quarterly report to Finance Committee of the Board and publicly quarterly through corporate dashboard.	This is a priority item because it is tied to Health System Funding Reform funding and changing HBAM and Quality Based Procedure Funding. LEAN initiatives related to improved patient care, education, access, but also costing continue. The priority is in managing limited funding with cost pressures while at the same time sustaining and improving the orthopedic program. The assumptions we make are at risk without timely input from the Ministry of Health and Long Term Care.
Patient- Centered		From NRC Picker: ED Only "Overall, how would you rate the care and services you received at the hospital?" Q3 2012/13 - Q2 2013/14	90.30%	93%	provincial levels.	1) Process improvements will improve patient satisfaction by reducing length of wait and improve patient throughput. Improvements plans include decrease LOS for admitted patients, standardized care plans, faster time to admit decision by MD, and communications of current demands on the department when wait times are lengthy. 2) ED Follow-up phone calls made to patients who left without being seen (LWBS) 3) Sustain expectation of 2 business day response to patient and family complaints, currently greater than 90%. Responding to patient complaints early helps to demonstrate accountability	Tool (DART) is displayed to the physicians and staff to	day reciept and review complaints , two business day response to complaint. Meet or exceed provincial	Communication seems to be a common complaint amongst patients when interviewed over the phone. Clear and regular communication of wait times and reasons for the wait, ensure patients feel they are valued and not forgotten. The initial contact with triage nurse can set the tone for the visit-so coaching to all triage trained nurses to be self aware of all communication styles, personal or physical.
